

Revolution Network + Mysterium

Setup Guide — One-time configuration

Prerequisites

Before you begin, make sure you have:

1. Revolution Network installed and set to launch on Windows startup
2. Access to a web browser
3. An account on my.mystnodes.com (optional but recommended)

One-time Setup (do this once only)

1 — Launch Revolution Network as Administrator

1

Right-click on the Revolution Network icon

Right-click on the shortcut or .exe file of Revolution Network.

2

Open Properties

Click on 'Properties' in the context menu.

3

Compatibility tab

Go to the 'Compatibility' tab.

Check the box 'Run this program as an administrator'.

Click 'OK'.

! Permanent setting. Revolution Network will always launch as admin automatically on Windows startup.

2 — Enable Mysterium Services

1

Make sure Revolution Network is running

Revolution Network must be open and active in the taskbar.

Without the app running, the Mysterium panel will not be accessible.

2

Open the local Mysterium panel

Open your browser and go to: <http://localhost:4449>

3

Log in

If a login page appears, click 'Confirm'.

Make sure the URL shown is <http://localhost:4449>

4

Enable all services

In the 'Node' menu, under 'Services', turn on all 4 toggles: B2B Data Scraping, B2B VPN, VPN, Public. The status should change to 'Online' and 'Great'.

! Services remember their state. Once enabled, they restart automatically on every boot — as long as Revolution Network is running.

3 — Register your node on MystNodes (optional)

1

Go to Settings

In the panel at <http://localhost:4449>, click 'Settings'.

2

Claim your node

Click the 'Claim on my.mystnodes.com' button.
Log in to your MystNodes account.
Your node will appear in your node list.

Summary

Action	Frequency	Automatic after?
Run as admin (properties)	Once	Yes
Enable Mysterium services	Once	Yes
Claim on MystNodes	Once	Yes
Daily usage	Automatic	Nothing to do

After these steps, your node runs 24/7 automatically.
